

# Aggregation Switch with 144 Optical Ports

## Overview

This rack-mount device is designed with DiCon's proprietary 3D MEMS mirror technology and delivers industry-leading optical performance. The unit works without any position sensor or feedback loop, and the optical signals can pass through the equipment without any observable loss in a data center environment. This innovative, next-generation open networking high-density aggregation switch offers optimum flexibility and cost-effectiveness for the web 2.0, enterprise, mid-market and cloud service providers with demanding compute and sensitive to packet loss. Long-distance installations often require fiber optic cables to connect different sites because of. The CSOS-72S-LC and CSOS-144D-LC redefine fiber management efficiency with compact, robotic switching built on XENOptics' patented 3D Optical Switching (3D-OS) technology. Equipped with future-proof fiber-optic and multi-Gigabit Ethernet (mGbE) ports as well as high-throughput uplink. 1. Layer 3 automatic failover (VRRP) and OSPF support is. The high port density optical switch family is optimized for remote fiber testing of networks with high fiber count cables or many FTTP service points such as PON and DAA/ DWDM networks. The scalability and high capacity enable rapid test port expansion as a network grows delivering remote fiber.
