

Assembly of the electrical box is a key point

Overview

Box building assembly is the electromechanical assembly process that includes enclosure fabrication or sourcing, installation and connection of PCBAs, cable harnesses, power supplies, connectors, sensors, displays, and other components. Box build assemblies are complex, compact units that have to meet a wide range of dimensional and mechanical requirements. They often need to operate sealed with significant amounts of heat output internally, while they need to resist corrosion, wind, snow, rain, external EMI, etc. Strategic Elements: Why OEMs Utilize Integration VII. Conclusion: Moving Beyond Board-Level The realization of electronic products is typically divided into two main stages: circuit board level production and final system integration.
