

Bahamas DFB Distributed Feedback Laser 200G

Overview

Covering NIR to LWIR wavelengths (750nm-17 μ m), these lasers feature integrated DFB gratings and TEC cooling for robust thermal management and low-noise performance across diverse conditions. The acronym DFB laser stands for distributed feedback laser. Their key features relative to other semiconductor lasers are their single longitudinal mode (single frequency) emission profile, their high stability and their wavelength tunability. It's important to note that the wavelength tunability. A distributed-feedback laser (DFB) is a type of laser diode, quantum-cascade laser or optical-fiber laser where the active region of the device contains a periodically structured element or diffraction grating. Typically, the periodic structure is made with a phase shift in its middle.
