

Bus trunking connector overheating

Overview

Loose connections increase contact resistance, which may lead to overheating and possible equipment damage. Bus ducts contain insulation materials that protect the conductors from electrical faults. Yokogawa DTSX monitoring solution constantly monitors connections that tend to deteriorate over time and contributes by pinpointing abnormality locations and reducing workload of maintenance personnel, helping to ensure stability in plant operations. Whether you're involved in. I have a 1750A bus-duct 4-wire WYE 240/415 50hz with a run of approx 70 meters supplying a mssb supplying 3 chillers in a high rise, which is overheating and melting the insulation the neutral is only rated at 100%. The data logger i have had on the ACB in MSB at last download reads 481. 85. If an electrical system overheats critical components will start failing, leading to an instant system breakdown.
