

Butterfly-shaped optical fiber communication cable

Overview

FTTH Butterfly Optic Cables were designed to eliminate those compromises. The name comes from the cross-section: a flat, wing-shaped profile with the optical fiber sitting in the center and two parallel strength members flanking it on either side. They are called butterfly-shaped due to their unique design, which features a flat shape with two parallel fiber ribbons running down the center. Briticom™ offers a wide range of indoor and outdoor fibre optic distribution, patching and consumer cables – including Plenum, Riser and LSZH in all diameters. These are used to provide links to protocols such as FTTH, FDDI, 10 Gigabit Ethernet, ATM. Briticom® offers Armoured Butterfly-Shaped. GJYXFHS optical cable is engineered for efficient conduit entry of optical cables, offering robust performance and durability.
