

Cable tray 180° rotation

Overview

It is not possible to rotate cable tray about its cross-section axis, but with beams you can. Whilst this can be achieved with structural beam elements, this cannot be achieved with the out of the box cable tray families. Selecting the right cable carrier system can be challenging, but it's essential for. However, Cable Trays do have certain limitations in that the channel shape can only be set to a horizontal aspect where the bottom edge runs parallel to its supports. In many applications particularly in the infrastructure space, there is a need to be able to rotate the 'C' channel section so that. Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. We offer a generous satisfaction guarantee on all orders. Phone, email and chat support available. Placing channel cable trays upside down is also desirable, I have seen some constructions using this positioning, mainly for small size ones.
