

Cable tray straight line techniques

Overview

Splice Plates: Connect straight sections of tray together securely. Cable tray (or cable ladder) systems are a popular alternative to electrical conduit systems, as they have an outstanding record for dependable service, design flexibility and cost savings in commercial and industrial applications. A properly designed and installed cable tray system will provide. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. After determining the routing of the cabling, a network cabling project initially needs to consider the laying of cable trays, which can be made of metal, conduit, or plastic (PVC) tubes based on the material used. From the scope of tray-laying, it can be divided into work area trays, distribution. This method statement covers the site installation of the cable tray & ladders and the requirements of checks to be carried out. The Ladder Tray features light, rugged, tubular steel construction.
