

Cable tray supports must be galvanized

Overview

The material of a cable support system is normally steel or stainless steel. Various galvanisation surfaces can be applied to improve corrosion protection., ABB offers steel cable tray with pre-galvanized and hot-dip galvanized. Galvanization is an economical and effective way to protect steel as it naturally oxidizes when exposed to air, but at a much slower rate than steel. A cable support system consists of cable support lengths and system components, such as cable support fittings, support elements, mounting. Cable trays play a vital role in supporting electrical cables and wires in commercial, industrial, and utility installations. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to situations of moisture, overheating or. Scope :- This specification covers the following major activities; - Fabrication and installation of Mild Steel (MS) support structure for Galvanized Iron (GI) Cable tray. - Installation of perforated GI Cable tray of size 300 x 50 mm at height ~12 meter on wall and existing metal support structure.
