

Cable trays bend to avoid

Overview

Cable trays need support at regular intervals to hold weight evenly and avoid deformation. 5 to 3 meters, depending on the tray size and expected load. Too much distance between supports allows trays to bend, putting stress on the tray and. Cable trays are essential for supporting our electrical and data cables in modern buildings. Before we even. en completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. It ensures safety and long-term reliability in electrical systems. They come in various forms, including ladder trays, solid-bottom trays and wire mesh trays such as stainless steel wire cable trays.
