

Cable trays passing through walls and holes

Overview

When cable trays pass through walls or floors, seal openings using fire-rated penetration sealing materials. Do not modify or damage the tray coating or structure during use. It was as if a different person planned and executed each and every hole — even in the same building, even on the same floor! There. The following charts give the number of 3M pillows needed to completely firestop an opening that cable tray passes through. UL Listed Systems Concrete Wall - C-AJ-4056 3 HR F-Rating, 3/4 HR T-Rating Gypsum. One of the most commonly recurring non-compliances seen during an annual assessment is the absence, or inadequate sealing, of cable penetrations passing through the fabric of a building. A fire can spread rapidly through a building where permanent openings are present and especially where flammable. When installing electrical systems in commercial or industrial buildings, it's almost inevitable that cables will need to pass through walls, floors, or risers.
