

Can a network server rack cause a circuit breaker to trip

Overview

Even if the added server doesn't immediately trip a breaker, it's possible the circuit is near (or at) capacity. The hardware has not changed at all minus a UPS I just got so that the drives don't suffer from constant shutting down. The UPS reports I'm drawing about 220 volts. I've tried plugging the server in. Consider two cases where metering at the panelboard but not the circuit breaker could lead you astray: (1) Server Power Supply Failure - This is the most common cause of a circuit breaker tripping on a rack PDU. When this. It's an alert that something is wrong, and it almost always comes down to one of three issues: an overloaded circuit, a short circuit, or a ground fault. The key is knowing what's driving each one so you can troubleshoot it correctly.
