

Communication Tower Inspection and Assessment

Overview

Communication tower inspections are comprehensive technical evaluations designed to verify the structural integrity, operational reliability, and regulatory compliance of the tower and all associated equipment. Structural Standards for antennas and their supporting structures are outlined in ANSI/TIA-222. These towers are exposed to harsh environmental conditions, heavy. Analysis and design of Tower Inspections and TIA Condition Assessment Training courses, focusing on means and methods criteria for the construction, installation, alteration, and maintenance of communication structures. This includes compliance with ANSI/TIA-222-H, and 322 standards, as well as. NWTE has been on site to climb and inspect over 1,500 guyed and self-supporting (lattice) cellular communications and broadcast towers. NWTE also evaluates other structures used for communications such as water towers, building rooftops, concrete poles, wood/timber poles and steel monopoles.
