

Comparison of Low Loss and Price Performance Comparison of Pigtail Connectors

Overview

This paper compares two different methods of field termination for multimode fiber: fusion spliced pigtails and pre-polished connectors. This paper will study the performance, material cost, tooling cost and installed cost of each method. But what exactly sets a fiber optic connector apart in terms of its merits?

The primary purpose of a fiber optic connector is to terminate the ends of fiber optic cables, ensuring they can be interconnected reliably with minimal optical loss. By the end, you will have a comprehensive understanding of why pigtails deserve a place in every fiber deployment toolkit. Standard loss MPO is usually acceptable for short, simple channels with adequate optical margin. Each type has its own unique design, size, and compatibility features.
