

Configuration of circuit breakers in lighting distribution boxes

Overview

Reducing Number of Poles: Use 1P or 1P+N circuit breakers where appropriate, reserving 2P breakers for the main switch and high-power circuits. Why do you need GFCI or AFCI breakers?

Choosing the right size and setup for your distribution box keeps your electrical system safe and working well. You lower the chance of circuits getting too hot or overloaded when you pick the right box for your needs. When configuring and selecting, multiple factors need to be considered comprehensively to ensure that the selected circuit breaker. The information provided in this document contains general descriptions, technical characteristics and/or recommendations related to products/solutions. This document is not intended as a substitute for a detailed study or operational and site-specific development or schematic plan.
