

Connecting multiple routers with a single fiber optic cable

Overview

yes, for single-mode modules, you'll need single mode fiber/cable. Assuming you don't have experience with manufacturing the proper cable, the number of strands don't count into it, really. I'm planning to use a TP-Link MC220L transceiver to convert the optical signal to ethernet. This ethernet will then go through a 1 Gbit/s switch, and rout two ethernet cables to each floor. On each floor each ethernet cable will be connected to a router, which will then distribute the internet. Assume you have house with direct access to an optic fibre cable (FTTP). Before you begin configuration, it is. I'm struggling with scenario where I need split single WAN connection (6 public addresses available (/29)) between 2 seperate networks. 08-08-2018 02:55 PM It depends.
