

Construction site electrical distribution box wiring not covered with conduit

Overview

Learn what OSHA requires for temporary wiring on construction sites, from grounding and GFCI protection to overhead clearances and employer liability. Calculate box fill instead of guessing (NEC 314). Everything else builds on these five fundamentals. 15, a junction box is required whenever: You cannot: Common. work requires electrical power for many purposes. However, exposure to weather, frequent relocation, rough use and other conditions not normally encountered with conventional wiring systems necessitate special consideration not required in other applications or in completed structures. A conduit body is a removable-cover section of a conduit system that provides access at junctions or termination points. Article 314 applies to: These. The provisions of this paragraph do not apply to conductors which form an integral part of equipment such as motors, controllers, motor control centers and like equipment.
