

Data Center Room Environment Requirements

Overview

EN 50600: The European standard EN 50600 defines requirements and recommendations for the planning, construction and operation of data centers. It covers topics such as site selection, building design, energy supply, cooling, security and availability. Reduce energy use by making systems as efficient as possible – the associated data center metric is Power Usage Effectiveness (PUE). Use these environmental design criteria to ensure that your data center environment provides optimal conditions for your server operation. For information, see Section 3. 5, “Ventilation and Cooling Requirements”. Does the computer room air handling meet temperature and humidity requirements?

Does the installation floor layout satisfy the. As of 2008, ASHRAE standards recommend a data center temperature range between 65 and 80 degrees Fahrenheit (18-27°C). The recommended range for A1 to A4 class hardware is 18°C to 27°C (64.
