

Does the optical module have to be an original manufacturer s

Overview

Original equipment manufacturers supply branded modules known as OEM optics. Third-party vendors supply compatible fiber optic modules rather than the original manufacturer. Optical modules typically have an electrical interface on the side that connects to the inside of the system and an optical interface on the side that connects to the outside. In fact, there are only a few optical module manufacturers in the world that have a complete production system, such as Finisar, AVAGO, etc. Both brand owners and third-party manufacturers have asked specialized optical module manufacturers (OEM, Original Equipment Manufacturer) to make optical. It exists only on an SFP optical module. Shell Protects internal components. All modern transceivers follow industry.
