

Electric distribution box at a construction site in Chile

Overview

The main legal framework for the electricity sector in Chile is the "General Law of Electric Services (DFL-4)", a rather liberal framework which enables private investment in generation, transmission and distribution. Generation has been structured as a competitive market, whilst transmission and distribution are regulated. The Chilean model for the electricity market was very innovative in it. OverviewAs of August 2020 Chile had diverse sources of electric power: for the National Electric System, providing over 99% of the. There are four separate electricity systems in Chile: • the (SIC, Sistema Interconectado Central), which serves the central part of the country (75.8% of t. Total electricity coverage in Chile was as high as 99.3% in 2006. Most of the progress in rural areas, where 96.4% of the population now has access to electricity, has happened in the last 15 years, following the establis. In 2002, the average number of interruptions per subscriber was 9.8, while the total duration of interruptions per subscriber was 11.5 hours in 2005. Both numbers are below the of 13 interr. The National Energy Commission (CNE), created in 1978 to advise on long-term strategies, is responsible for advising the Minister of Economy on electricity policy and for setting of regulated distribution charges. T.
