

Energy-saving cable trays require no accessories

Overview

While the material cost of cable trays varies depending on size and coating, wire mesh trays often require fewer accessories: No need for costly elbows or tees—trays can be shaped on-site. Fewer support brackets needed due to lightweight construction. When completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is bent the minimum bend radius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. Our products are made of 100% recycled steel. Our products require no fabrication so no waste material is created. Our systems also use less hardware and accessories to install. The lightweight tray features. Compared to traditional solid cable trays or conduits, wire mesh cable trays for solar installations are easier and quicker to handle: Lightweight design makes them easier to transport and position, especially on rooftops. Can be cut and bent on-site with minimal tools—no need for prefabricated parts.
