

Ex-factory price of EU-made optical modules

Overview

The price for both monofacial and bifacial N-type modules increased to €0. 119/Wp), representing a 5% and 12% price increase, respectively, from the previous month when prices remained steady or edged slightly downwards. Commencing with an outlook on the global PV manufacturing landscape, the study calculates the production cost of PV modules and their components, based on an analysis performed by Fraunhofer ISE, NREL and RCT Solutions, to determine the existing cost gap in different key regions and potential. Chinese oversupply pushed module prices below €0. 11)/W, European production lines halted one after another, and announced gigawatt-scale projects stalled at the financing stage. Firstly, the energy prices are rising again. In doing so, we differentiate between the main technologies available on the market. Telecommunication networks (wireless and wired) are the second-largest application, contributing 28% of market revenue in 2022. The automotive industry's demand for optical.
