

FBT tapered beam splitter

Overview

FBT splitter, short for Fused Biconical Taper splitter, is a type of optical power splitter used in fiber optic networks to divide or combine light signals. The optical network system uses an optical signal coupled to the branch distribution. Basically, there are two types of optical fiber splitter classified by their working principle: FBT splitter (fused biconical taper splitter) and PLC splitter (planar. FBT (Fused Biconical Taper) fiber optic splitter for cost-effective signal splitting in single mode networks. Available in 1x2 and 2x2 configurations with steel tube and ABS box packages. 10-year warranty with stable performance across -40°C to $+85^{\circ}\text{C}$ operating range. Specifically, the process involves fusing and stretching two.

Fiber-optic splitter

OverviewAdvantages and disadvantagesTypesSplitting ratio principleSee also

- The FBT splitter offers low cost, common materials (quartz substrate, stainless steel, fiber, hot dorm, GEL), and an adjustable splitting ratio. However, its losses are wavelength-dependent and it offers poor spectral uniformity, cannot ensure uniform spectroscopy, and is temperature sensitive.
- PLC splitter: Losses are not sensitive to the wavelength, spectral uniformity is higher and it is more compact and has lower cost with greater degrees of splitting. However, device fabrication process is more complex.
