

# Fa fiber optic array pigtail length

## Overview

A fiber optic pigtail is a short length of optical fiber —typically 0.5m to 2m—that has a factory-terminated connector on one end and bare fiber on the other end. With customizable V-groove chips and covers, and Corning's capability of developing and making specialty fibers, our FAU products can meet a wide variety of customer requirements on the inter-fiber core pitch and its precision, channel number, fiber type, and quality of polish surface. AFR provides high quality Fiber Array to meet customers' various demands with low insertion loss, high return loss, 980 nm, 1064 nm, 1310 nm, 1550 nm or Custom requests. Applications: FAU (Fiber Array Unit) multifiber assemblies offer high-density, high bandwidth solutions for the new era of fiber optic applications, including telecommunications, data centers, silicon photonics, defense and medical applications.
