

Fiber Channel Principles

Overview

Fibre Channel (FC) is a high-speed data transfer protocol providing in-order, lossless delivery of raw block data. It handles high performance of disk storage for applications on many corporate networks. It supports data backup and replication. Fibre Channel is needed, as it is very flexible and enables the. “The Fibre Channel Industry Association (FCIA) is a mutual benefit, non-profit, international organization of manufacturers, system integrators, developers, vendors, industry professionals, and end users. FC-2MThe intention of the Fibre Channel (FC) is to develop practical, inexpensive, yet expendable means of quickly transferring data between workstations, mainframes, supercomputers, desktop computers, storage devices, displays and other peripherals. Unlike general-purpose networks like Ethernet, FC is specifically built for.
