

Fiber Optic Cable Splice Breakage Point Instrument

Overview

The Optical Time Domain Reflectometer (OTDR) will be used to test splice loss and to conduct span analysis. JavaScript seems to be disabled in your browser. Skip to Content Monday-Friday 8AM-6PM(EST). An OTDR helps pinpoint faults, breaks, and splices along a fiber link with serious accuracy. Crucial for certifying new links or troubleshooting existing ones. Good OTDRs come with touchscreen interfaces, multiple wavelengths, and. Fiber Optic Instruments are essential tools for building and maintaining high-performance optical networks. An Optical Power Meter and Laser Light Source will be used to measure power loss on each completed ring or distribution span to verify continuity between fibers (no fibers incorrectly spliced. Mechanical splices are faster for emergency restoration but have higher typical loss (0. A professional splice kit includes: Every splice starts with proper preparation: clean the work area, protect against wind, and.
