

# Fiber Optic Cable Splicing Experience

## Overview

This course covers how to successfully splice the two most common fibre types (900um and 250um), as well as the various issues that may occur and how to solve them. Students will begin the day by performing basic splices before advancing onto pigtail splicing and joint. Fiber optics is the fastest and one of the safest ways to transmit information online. Fiber optic strands are ultra-lightweight and about as thin as human hair, and yet, they have more than eight times the pulling tension of a copper wire. And because fiber optic cables carry light instead of. Fiber optic cable splicing involves joining two fiber optic cables together. Another method of connecting optical fibers is termination or connectorization, which consists of processing the end of a fiber optic bundle so that it can be connected to other fibers or devices through fiber optic. Our 1 Day Splicing course is designed to provide the understanding and skills needed to operate and maintain a fusion splicer regardless of the experience of the engineer. But what happens when you need to join two cables to extend a network or repair a break?

You can't just twist them together. Fusion splicing is both an art and a science. 1dB loss that will last the life of the cable plant.
