

Fiber Optic Switch RXTX

Overview

In fiber media converter, TX stands for Transmit and RX stands for Receive. SFP (Small Form-Factor Pluggable) modules are compact transceivers that allow for high-speed communication between network devices. They are used for data as well as voice communication applications and offer. This article is intended to assist with the interpretation of the SFP transceiver TX and RX power readings available from the CLI. Connectrix: How to troubleshoot Fibre Channel node to switch port or SFP communication problems by elimination. TX (Transmit): This is the port or process that sends data out of the device.
