

Fiber optic switch connected to internal network

Overview

A fiber-optic switch allows you to connect two or more fiber-optic cables to form a network. These can behave like a typical Ethernet switch. Fiber optic technology has revolutionized data transmission, offering unparalleled speed and bandwidth capabilities. As businesses and organizations strive to meet the demands of modern networking requirements, the adoption of fiber optic cables has become essential. Simply put, it defines how network. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of cnnnection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches. I need to connect 4 Floor Building with 4 Cisco 2960 - 48 ports switch each other and it needs to be through a fiber. So all PCs connected to each switch would reach the LAN/WAN from the other switch. (attached is the image here with) I see that the 2960 has 2 SFP ports each port of each switch. Fiber optic cabling is increasingly used to connect network switches and other datacom equipment, especially in long-distance and mission-critical applications.
