

Fiber optic switch has no output port

Overview

Check the transceiver status using 'show ports <port> transceiver information detail'—look for signal loss or power anomalies. Also verify correct SFP module compatibility, clean fiber ends, and ensure auto-negotiation or duplex settings match on both ends. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications. There are no specific requirements for this document. Try to set the speed setting manually on both sides. For example, some higher-end switch models will have speed set to. The trusted connection from upstream is coming over on fiber (with a copper failover) and the unit is switching between them as expected. Topology goes: FortiGate -> 1048E Switch -> 124F Building Switches via 62. 5/125 orange OM1 fiber We got a new switch (same model). Connected just. Summary: The Show fiber ports optical transceiver port detail command gives inconsistent results on the Dell PowerConnect 6024 and 6024F switches - Product Support Quick Note (PSQN) - 173560.
