

# Function of a cap-type fiber optic splice box

## Overview

A Fiber optic cap type splice box is a protective enclosure designed to house and organize fiber optic splices. The main components of a splice box are the splice cassette that picks up the fibers and. At the core of this system's precision and reliability are Fiber Optic Splice Boxes—the unsung heroes that house and protect the delicate junctions where fiber cables are joined. Introduce that choosing between dome (cap-style) and horizontal (in-line) closures depends on specific project requirements. The fiber cabinet is. Fiber optic splice closures are integral to the seamless operation of FTTA (Fiber to the Antenna) and other outdoor fiber optic applications. As fiber optic networks continue to expand across urban, rural, and industrial environments, the reliability of connection points becomes.
