

GPON optical module docking and transmission

Overview

An OLT consists of three major parts: 1. Service port interface function - Provides translation between service interfaces and the TC frame interface of the PON section. 2. Cross-connect function - Provides a communication path between th. An OLT consists of three major parts: 1. Service port interface function - Provides translation between service interfaces and the TC frame interface of the PON section. 2. Cross-connect function - Provides a communication path between the PON shell and the Service shell, as well as cross-connect functionality. 3. Optical Distribution Network (ODN). Functional blocks are similar to the OLT. In the scenario that the ONU/OLT operates with a single PON interface (max 2 for protection purposes), the cross-connect function is omitted. Instead of this function, the service MUX and DEMUX are now responsible for traffic. ONU Management and Control Interface (OMCI) messages are used to discover ONT/ONUs for management and control.
