

Global optical module production capacity

Overview

The global production capacity of 400G optical modules is expected to reach 10 million units by 2024, up from 2. Supply chain disruptions in 2022 caused a 15% delay in delivering high-speed optical modules to data center clients, primarily due to. China accounts for over 70% of global optical module manufacturing, with Shenzhen and Suzhou as major production hubs. 6 billion by 2034, advancing at a compound annual growth rate (CAGR) of 11. 5% during the forecast period from 2026 to 2034. Optical modules, which encompass transceivers, cables, amplifiers. Optical Modules Market Revenue was valued at USD 3. These components form the core of optical transceivers, converting electrical signals to optical signals (and vice versa) for telecommunications and data center applications. This robust growth reflects a complex landscape shaped by accelerating adoption in cloud, telecom, and enterprise. An optical module (or optical transceiver) is a photoelectric conversion and signal conditioning unit integrated in a standard package, used to transmit high-speed digital signals between devices via optical fiber.
