

High Voltage Small Busbar System Solution

Overview

Robust HV busbar and enclosed busbar solutions up to 35kV, designed for substations, mining, and offshore platforms. One of the signature products developed by Intercable Automotive Solutions are our custom made high-voltage busbars manufactured to client specifications. Engineered for power distribution, they are made of copper or aluminum layers separated by insulating materials and laminated into a single structure. Designers choose ROLINX busbars for the quality and reliability. Busbars (bus bars) are integral to power distribution and serve numerous industries including automotive, industrial, and aerospace. Busbars are metal bars that can be composed of numerous alloys but are most commonly copper or aluminum. Typical busbar applications include switchgear, panel boards. To connect various high voltage (HV) components to the HV system, TE also delivers a wide variety of busbars.

ROLINX® Busbars

BenefitsWhat Is A Busbar?Busbar Roles in Power ApplicationsWhy Choose Rolinx busbars?A laminated busbar is a multilayer construction of conductors: copper or aluminum separated by thin dielectric materials, laminated in one structure. Electrically, it is a multilayer electrical circuit that distributes the electrical current from capacitors (buffer) to power modules (IGBT) through specific connections.
