

High-voltage tubular busbar in Democratic Republic of Congo

Overview

The Inga-Shaba EHVDC Intertie (officially: The Inga-Shaba Extra High Voltage D. Intertie; nickname: Inga-Shaba and also referred to as Inga-Kolwezi) is a 1,700 kilometres (1,100 mi)-long high-voltage direct current overhead electric power transmission line in the Democratic. A 1,700 km power transmission link that transmits power from Inga Falls on the Congo River to the copper mining district of Katanga in the Democratic Republic of Congo (DRC). Image. To connect various high voltage (HV) components to the HV system, TE also delivers a wide variety of busbars. Busbars provide a safe HV connection on shorter distances. Aluminium offers strong electrical conductivity at roughly half the weight of copper, with built-in corrosion resistance and full recyclability.
