

How far apart are PoE switches

Overview

In PoE (Power over Ethernet) technology, the Ethernet link between the Power Sourcing Equipment (PSE) and the Powered Device (PD) has a clearly defined maximum distance limit—328 feet (100 meters). This limitation is not arbitrary; it is defined by the IEEE Ethernet standards that govern PoE. Standard Ethernet switches together with modern PoE switches use Ethernet cables for data transfer but their power delivery capacity varies based on distance. GZCOM, a leading provider of network infrastructure solutions, delves into the distance limitations of PoE and compares it with the data. The max PoE distance over Ethernet is 100 meters (328 feet) between a PoE power sourcing equipment (PSE) port and a powered device (PD). This PoE max distance is set in the IEEE 802. Environmental Conditions Extreme cold, heat, or moisture can increase resistance and impact cable performance, especially outdoors.
