

How is the power supply wired in the distribution box

Overview

Wiring Direction: Wiring between the main circuit breaker and each branch circuit breaker in the box generally goes on the left, and the wiring out of the distribution box generally goes on the right. Single Phase Distribution Box generally consists of Double Pole MCBs, Single Pole MCBs, and RCCBs. It serves as a central hub for distributing electricity throughout a building, ensuring that power is delivered safely and efficiently to all the required locations. It contains safety mechanisms like circuit breakers, neutral and ground bars, and wiring. The equipment distribution box is designed with the primary function of collecting electrical energy from the main supply line and distributing it to different points for further use inside the building.
