

How long can om3 fiber optic cables support

Overview

Typically, OM3 fiber is used for 10G Ethernet and can make connections up to 220 meters long. The OM4 fiber type was standardized in 2009, and compared to OM3. Because there is virtually no modal dispersion, singlemode can support incredibly long distances — tens or even hundreds of kilometres. Multimode fibre (MMF): With larger cores (50µm or 62. These modes travel at slightly different speeds. Identified by ISO 11801 standard, multimode fiber optic cables can be classified into OM1 fiber, OM2 fiber, OM3 fiber, OM4 fiber and newly released OM5 fiber. Two of the most widely deployed laser-optimized multimode fibers are OM3 and OM4, both designed to support high-speed data transmission. OM3 specifies an 850-nm laser-optimized 50-micron cable with a effective modal bandwidth (EMB) of 2000 MHz/km.
