

How to change the dynamic IP address on a fiber optic router

Overview

Changing your dynamic IP address involves forcing your modem or router to request a new one from your Internet Service Provider (ISP), a process typically achieved by restarting your equipment or using your router's settings. Understanding how to configure and change your router's IP address settings is essential for managing your network effectively. I will give you a sample configuration for NAT. Connect Fa0/0 to the LAN conf t Interface fa0/1 ip address dhcp Ip nat outside interface fa0/0 Ip nat. If you need to configure a router with Dynamic IP Here's how to do it. Once modem has been changed to Dynamic IP, I assume the router must be altered too. Before I pay \$100 for the computer tech to do another housecall, I would. Usually to access your Modem or Modem/Router, open a browser and type in the following address: 192.
