

# How to find the grounding of a distribution box

## Overview

Attach a ground wire from one of the threaded studs (A) at the bottom of the housing, to the mounting plate (B). The ground resistance between all system parts shall be  $< 1 \Omega$ . Power from factory ground must be installed by a qualified electrician.

Each DISTRIBUTION BOX and controller must be grounded. 26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used.

Equipment Protection: Grounding protects substation. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make.

Preparation: First, you need to prepare some necessary tools, including grounding wire, grounding rod, voltmeter, insulating gloves and insulating tools. The voltage, system arrangement, loads connected, and continuity of.
