

How to route cable trays in the server room

Overview

Once cable specifications are correct, cables should be installed from the switch horizontally, turned 90 degrees across a ladder rack to avoid radical turn that can damage cables, then routed vertically and connected to equipment. Depending on your business, you may need one or all of the following approaches to manage server rack cables. Vertical Cable Management Vertical cable management routes cables vertically from the server rack's top to bottom. This method helps maintain neatness and accessibility within the rack. In this guide, we will walk through how to select, design, and install cable trays specifically for server room environments, helping you avoid common mistakes and build a system that is both efficient and future-proof. What Makes Server Room Cable Management Different?

Designing cable tray systems. Start by documenting your existing setup so you know exactly what you are working with before you plan cable routes. According to the ITIC 2024 Hourly Cost of Downtime Report, a single hour of unplanned outage could cost over CAD 300,000 for more than 90% of mid-size and large enterprises. Before running any wire, sketch out the full.
