

Illumination by a red light pen on the optical module

Overview

Optical fiber red light pen (i., optical fiber fault detector, optical fiber fault test pen) is a 650nm (± 20 nm) semiconductor laser as a light-emitting device, which emits stable red light through a constant current source drive, and connects with the optical interface into the. Optical fiber red light pen (i. Using the light pen an operator can select, draw, or modify pictures on the CRT by means similar to using a conventional pen drawing on paper. The power of the light pen lies in the intimate relationship between. 30 years of experience in R&D and manufacturing - Jilong JILONG launched the VFL-22M mini red light pen, pocket design, small and portable, integrated VFL/LED function, strong and stable light source, strong penetrating power, detection distance of about 25 kilometers, designed with USB charging. The RPEN-210 is a necessity tool that should not be missing from any fiber plant manager or fiber optic installing technician.
