

Industrial Switch Certification Standards

Overview

The International Electrotechnical Commission (IEC) develops global standards for electrical and electronic technologies. That's why Belden is dedicated to designing certified solutions that comply with new requirements and meet the highest security standards. In addition to the testing programs, we offer a Total Certification Program (TCP) and Preferred Partner Program (PPP), where you are able to evaluate and certify. These certifications verify that the switches meet stringent industry standards for use in critical applications such as manufacturing, transportation, energy, utilities, and other demanding sectors. Understanding the IEC standards governing these components is essential for electrical engineers. IECCE, the IEC System of Conformity Assessment Schemes for Electrotechnical Equipment and Components, offers testing and certification services for industrial automation, which cover electrical safety, cyber security, energy efficiency, electromagnetic compatibility (EMC) and functional safety.
