

Industrial switches transmit fiber optic cables

Overview

Industrial fiber optic Ethernet switches are designed to deliver stable, long-distance, and interference-resistant network connectivity in harsh industrial environments where copper Ethernet is limited by distance or electromagnetic noise. Ethernet switches are available with different management levels and a variety of port configurations, from simple unmanaged switches up to fully managed Ethernet routing switches with up to 16 fibre ports and Gigabit transmission speed. Plus, optical transmission offers numerous advantages in process, manufacturing and offshore applications, as well as. In industrial networks, industrial switches play a critical role, and the selection of their fiber interface types is crucial for building efficient and stable networks. This article will provide a detailed introduction to the fiber interface types of industrial switches and offer a comprehensive. Simply put, industrial fiber optic switches are an essential component of interconnecting circuits that facilitate the control of communication flow between devices and select the path of fiber optic signals for data transmission in the network. They are used for connecting multiple IP equipment such as CCTV cameras, wireless access points, IP phones, computers, access.
