

# Key Points for Inspecting Fixed Distribution Boxes

## Overview

The SFG20 44-07 standard requires specific 6-monthly checks that include visual inspections for physical damage, verification of proper labelling, checking protective devices, identifying overheating issues, and ensuring overall functionality of distribution boards. Forget cookie-cutter checklists – we're talking about the real, practical inspection points that determine whether a distribution box will perform flawlessly for decades or become an electrical hazard in five years. Picture an audit like a health check-up for manufacturing. Inspect for any physical damage to the enclosure. Ensure that all labels and warning signs are legible. Internal Inspection Open. Premier Technical Services Group Ltd (PTSG) has identified a significant compliance gap affecting many facilities management companies and building operators across the UK. The issue concerns SFG20 44-07 requirements for distribution board maintenance, which are often overlooked in standard. Here are some key steps manufacturers can take: Regular inspection: Visual inspection is carried out monthly or quarterly to check whether the appearance of lines, wiring and equipment is normal.
