Large-scale optical cable traction

Overview

In fact, there are two methods for aerial optical cables laying: one is "fixed-pulley traction method", including "manual traction method" and "mechanical traction method"; the other is "cable tray moving and releasing method". Fibre-optic cables are designed to transmit signals and provide power, making them a highly versatile solution for a range of applications. The large-capacity reel can hold 15mm cable up to 300 metres, meeting the needs of large-capacity cable winding and improving work efficiency. Simultaneous. An Optical Cable Tractor, also known as an Optical Cable Pulling Machine, is a specialized device used to pull or feed fiber optic cables through ducts or trenches in telecommunication projects. They are categorized. Company Introduction:Zhengzhou Zhishi Changyun Technology Co. is headquartered in Zhengzhou Electronic and Electrical Industry Park, specializing in the research and development, production, and sales services of a series of products such as optical cable tractors, cable conveyors, grinders. The optical cable traction machine is suitable for 4-288 core optical cable, 7*2. 6mm steel stranded wire, 4*35mm2 cable.
