

Mirroring the core switch

Overview

To configure port mirroring, do as follows: Sign in to the switch CLI. Run the following commands: Set port 0/8 as the destination port and allow it to receive the. A workstation connected to Cisco Meraki switches can capture these packets through port mirroring. The most effective way to. Port mirroring is a common method for packet capture. It enables network administrators to monitor and inspect data traffic in real-time. Typically, packet capture requires a specialized piece of equipment called a TAP (Test Access Point), which is designed to passively capture network traffic. An administrator wants to mirror the inbound traffic from workstation "X" on port A5 and workstation "Y" on port B17 to a traffic analyzer connected to port C24 (see Figure 1. (Any unused session number from 1 to 4 is valid.

Cisco Span Modes
Cisco Span Availability
Set Up Span on iOS Switches
When a switch receives a packet, it references the destination address in the header of the datagram. It then makes a copy of the packet and sends that new version out on the port number that it has associated with that MAC address. In standard operations, which is termed "unicast," only one copy is made of an incoming message and that is sent out ...
