

Mobile fiber optic direct connection to switch

Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. It can provide significantly higher bandwidth and carry more data. I wish to connect (single mode) fibre optic cable to Fibre optic switch (DIN-rail mounted) directly without using patch panel or patch cords. This is due to no or less space available for patch panels in my. Fiber optic cabling is increasingly used to connect network switches and other datacom equipment, especially in long-distance and mission-critical applications. Fiber provides: Increased internet signal bandwidth. I'm debating if MM or SM would be better as I'll be buying the 1g optics from fs.
