

National Standard Grounding Wire for Cable Trays

Overview

National Electrical Code (NEC) Section 250. 122 rules the sizing of equipment grounding conductors. 122 displays the minimum conductor size for grounding raceways and equipment based on the ampere rating or setting of the circuit's overcurrent protective device. These systems provide an efficient and adaptable solution for managing a wide range of cables, including power cables, control cables, Ethernet, and fiber optic lines. The flexibility and scalability of cable trays make them an ideal choice for environments where cable density and organization can. Cable tray may be used as the Equipment Grounding Conductor (EGC) in any installation where qualified persons will service the installed cable tray system. There is no restriction as to where the cable tray system is installed. The conductor must be large. that system to lose its UL Classification.
