

OPGW junction box installation height

Overview

Installation Height: The OPGW joint box should be installed at a height ranging from 8 meters to 10 meters above ground level. This ensures optimal performance and accessibility across the transmission line. Please review the document (WI-0298 Rev 1) before proceeding with installation. **Uniform Positioning:** It is essential that the installation position of the connector. During installation and splicing, the minimum allowable bending radius should be about $20D$. It is recommended to use pulleys with diameters of 600mm and 800mm to ensure no damage to the cable. The width of the pulley groove should not be less than the diameter of the cable and should be as large as. (1) OPGW joint box is installed on the inside of the tower main material, the installation height should be 8-10m, and the installation position of the whole line should be unified.
