

Optical power meters can be calibrated infinitely

Overview

Power meters are calibrated using a traceable calibration standard. This is not normally an issue, since the test wavelength is usually known. We describe NIST measurement services for the calibration of optical fiber power meters. We explain the measurement standards, systems, methods, and uncertainties related to. EXFO can help save both time and costs with an automated calibration test system that is designed for the verification of power meters, attenuators, sources and optical time-domain reflectometers (OTDRs). On the display unit, the measured optical power and set wavelength is displayed. We can calibrate your Fiber Optic Power Meters at two service price levels: ISO9001 or ISO/ IEC 17025. We check the cleanliness of the optical detector. If we find a performance problem with the received instrument, we will let you know. You can also ask for a linearity.
